« namad » pleated panel system :
a visual & acoustic space divider
in natural felt

"namad" pleating panel :

With its natural fire retardancy & acoustic properties, felt enables us to address both visual & acoustic performances in a single product application. Equally « at home » in office, leisure, hospitality, education & retail environments.

**Suspended from a discreet linear or curved ceiling track
« namad » can be used on both wall to wall & ceiling to floor applications.**

**« namad » form and function is achieved by felt's physical properties,
enabling the base to be unsupported.
So it remains free and floating rather than creating a static barrier to user movements.**

Acoustic test results for « namad » felt products :

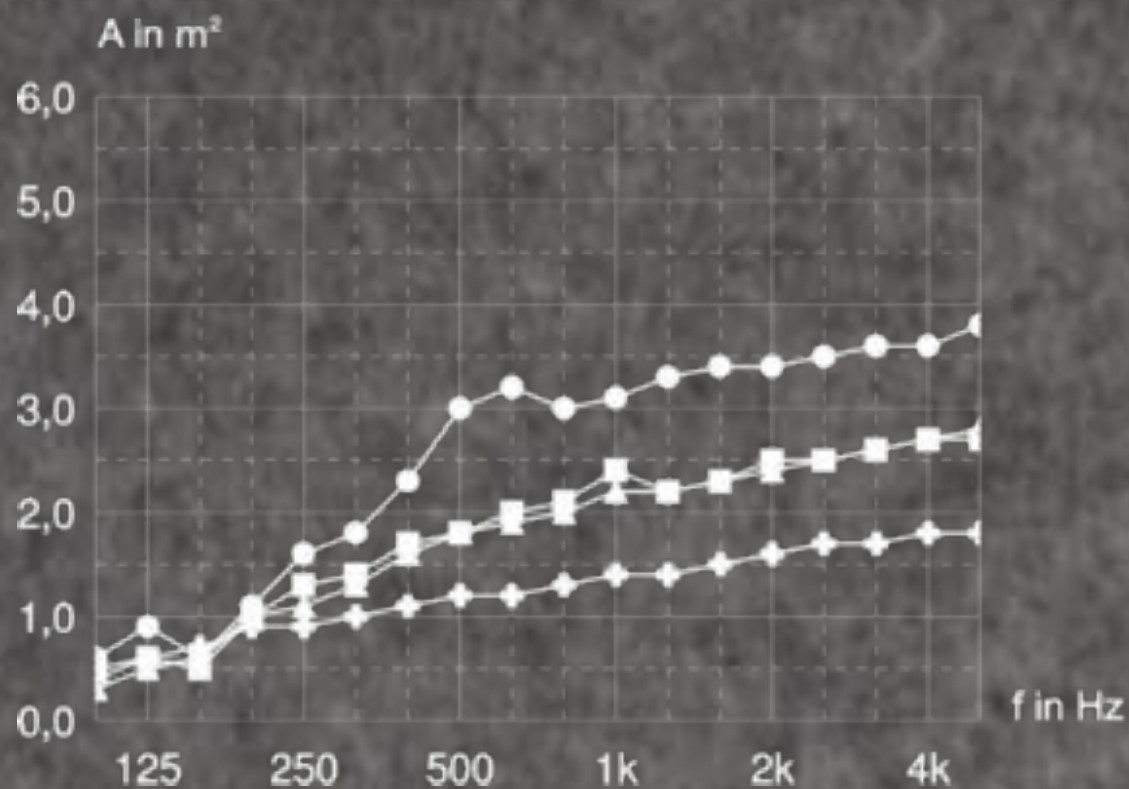

**Our aim was to determine the absorption factor of natural felt
and its equivalent sound absorption area A.**

**We were confident of achieving relatively high levels of acoustic comfort
as felt is intrinsically both porous and dense at the same time.**

The results prove that « namad » offers excellent sound absorption in both low and high frequencies.

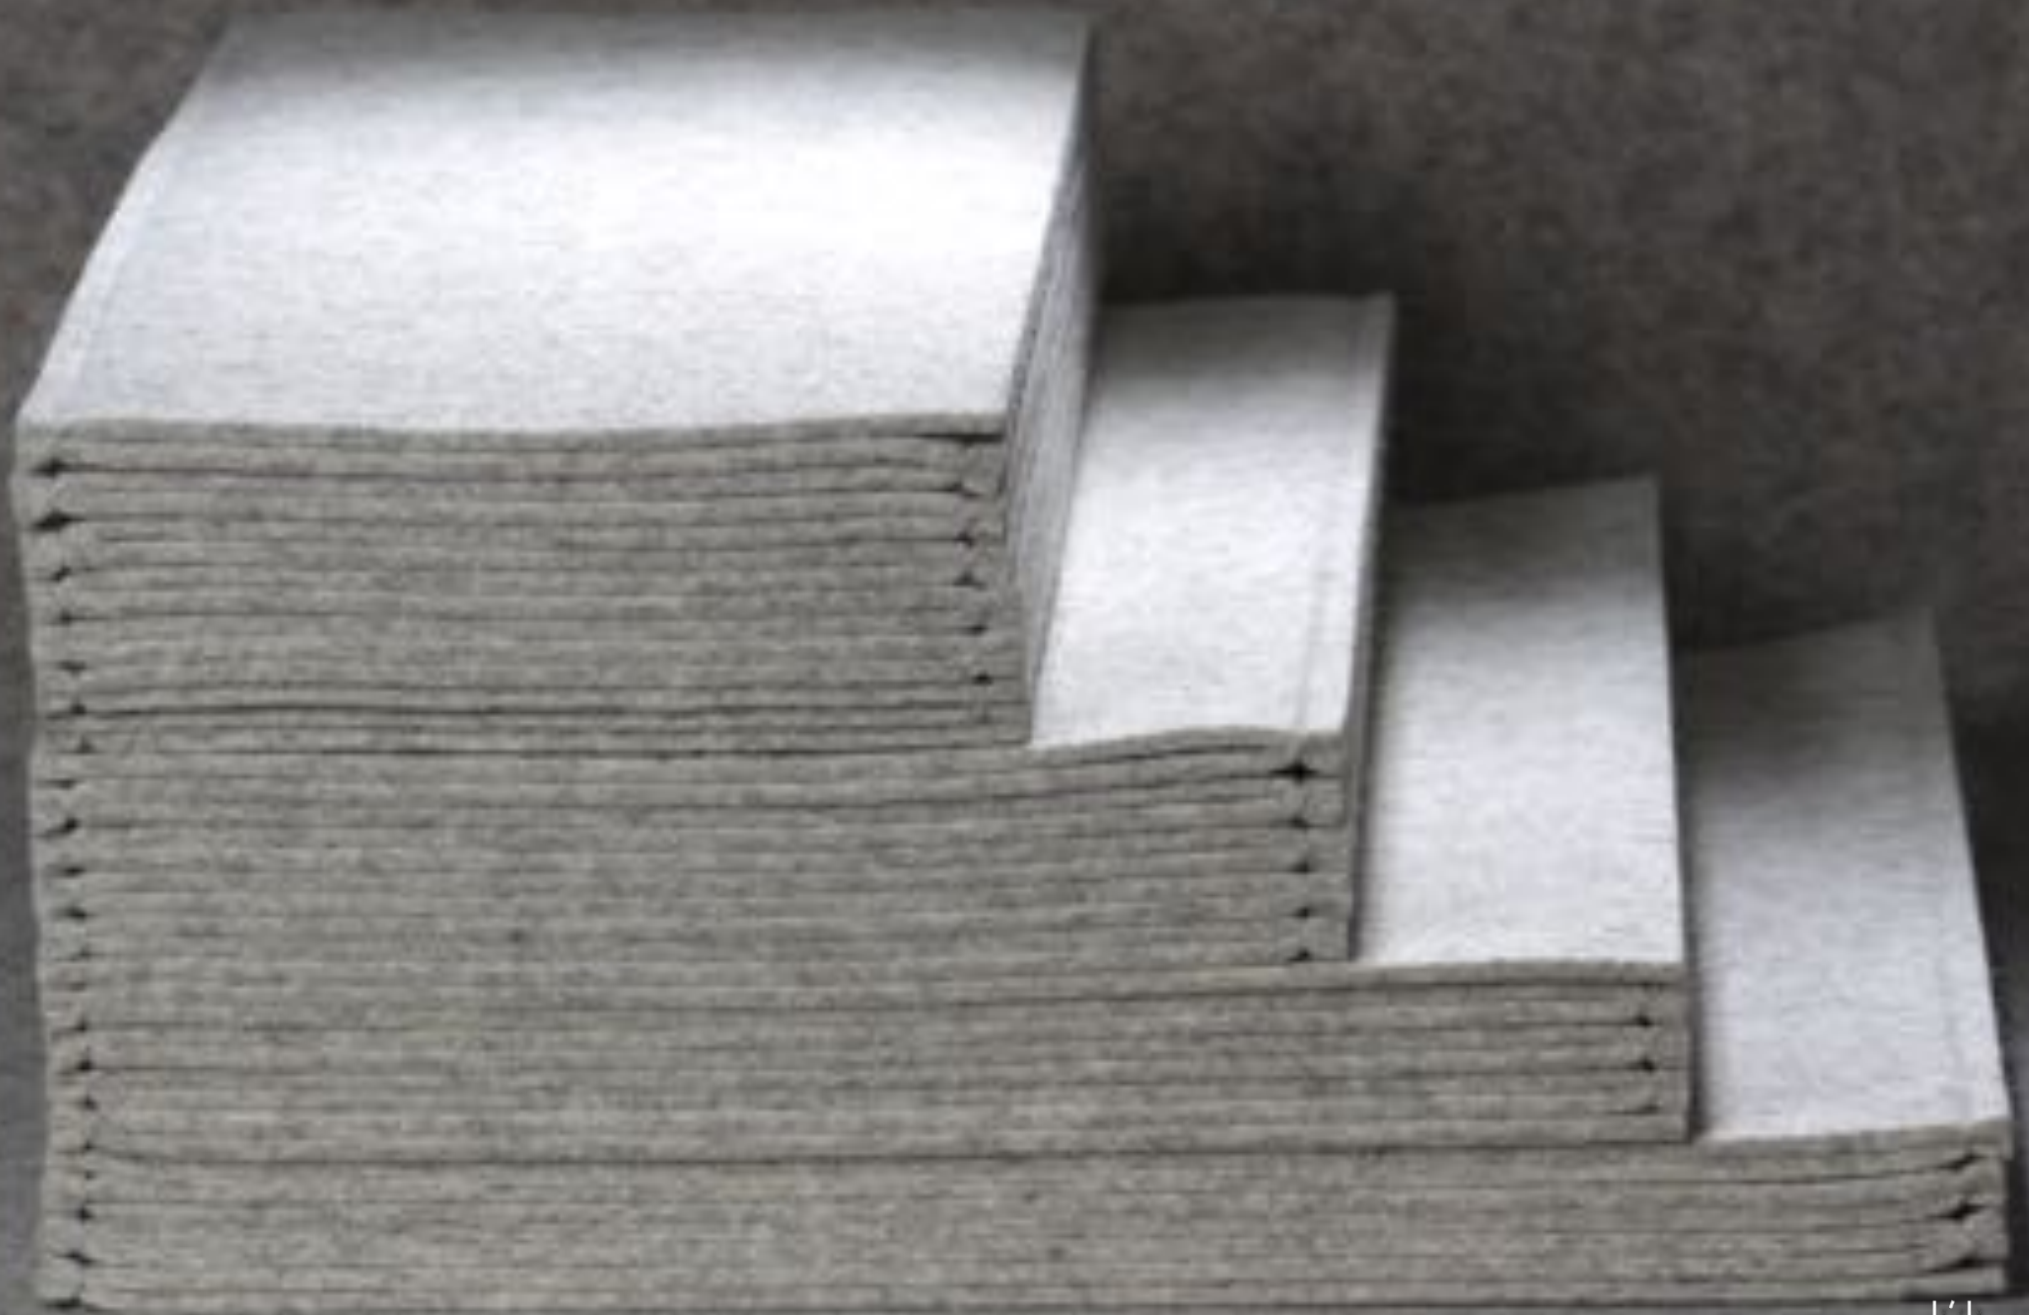

**Note: as part of any evaluation it should be noted that « namad » is suspended in space
and not acoustically assisted by elements such as walls.**

**Bands of felt are stitched together to form an accordion-like pleated panel.
The width of the bands can vary from 15, 20, 25 or 30cm.
Each order is handmade in our Paris workshop.**
